

Abstract

A method of printing an image utilizing a printer having print nonuniformities, the method comprising the steps of: converting the image into a digital bitmap comprised
5 of an array of pixels wherein each pixel is assigned a digital value representing marking information; defining each pixel as either a background pixel, interior pixel, or an edge pixel; and, reassigning the digital value of one or more edge pixels or interior pixels independently, thereby altering the appearance of the image when printed in order to compensate for printer nonuniformities.
